Configuration files
We added the following files to your project:
cypress.config.js
The Cypress config file for E2E testing.
cypress\support\e2e.js
The support file that is bundled and loaded before each E2E spec.
cypress\support\commands.js
A support file that is useful for creating custom Cypress commands and overwriting existing ones.
cypress\fixtures\example.json
Added an example fixtures file/folder

Create your first spec
Since this project looks new, we recommend that you use the specs and tests that we've written for you to get started.
Scaffold example specs
We'll generate several example specs to help guide you on how to write tests in Cypress.
Create new spec
We'll generate a template spec file which can be used to start testing your application.
If you feel that you're seeing this screen in error, and there should be specs listed here, you likely need to update the spec pattern.

Kitchen Sink
This is an example app used to showcase Cypress.io End-to-End (E2E) testing. For a full reference of our documentation, go to docs.cypress.io
Commands
Commands drive your tests in the browser like a real user would. They let you perform actions like typing, clicking, xhr requests, and can also assert things like "my button should be disabled".
